GENERAL SAFETY INFORMATION

Specified use

The industrial door drives intended for a power-operated door with a drive unit. The safe operation is only guaranteed with specified normal use. The drive unit is to be protected from rain, moisture and aggressive ambient conditions. No liability for damage caused by other applications or non-observance of the information in the manual.

Modifications are only permitted with the agreement of the manufacturer. Otherwise the Manufacturer's Declaration shall be rendered null and void.

Safety information

Installation and commissioning are to be performed by skilled personnel only. Only trained electrical craftsmen are permitted to work on electrical equipment. They must assess the tasks assigned to them, recognize potential danger zones and be able to take appropriate safety measures.

Installation work is only to be carried out with the supply off.

Observe the applicable regulations and standards.

WARNING: Important safety instructions.

- It is vital for the safety of people to follow all instructions. Keep this manual.

- Do not let children play with the appliance or control devices including remote controls.

- Follow all instructions, as incorrect installation can lead to serious injuries.

- The actuating element of the dependent switch must be positioned so that it can be seen directly on the driven part, but out of reach of the moving parts. If it is not actuated by a key, it must be placed at a minimum height of 1.5 m and not accessible to the public;

after installation, make sure that the mechanism is set correctly and that the protection system and any manual controls work properly.

Coverings and protective devices

Only operate with corresponding coverings and protective devices. Ensure that gaskets are fitted correctly and that cable glands are correctly tightened.

Weighted sound pressure emission level A of the motor

LpA less than or equal to 70 dB (A). WARNING Z101 . - The effect of noise emitted by the structure, including the driven part to which the drive will be connected, is not considered.

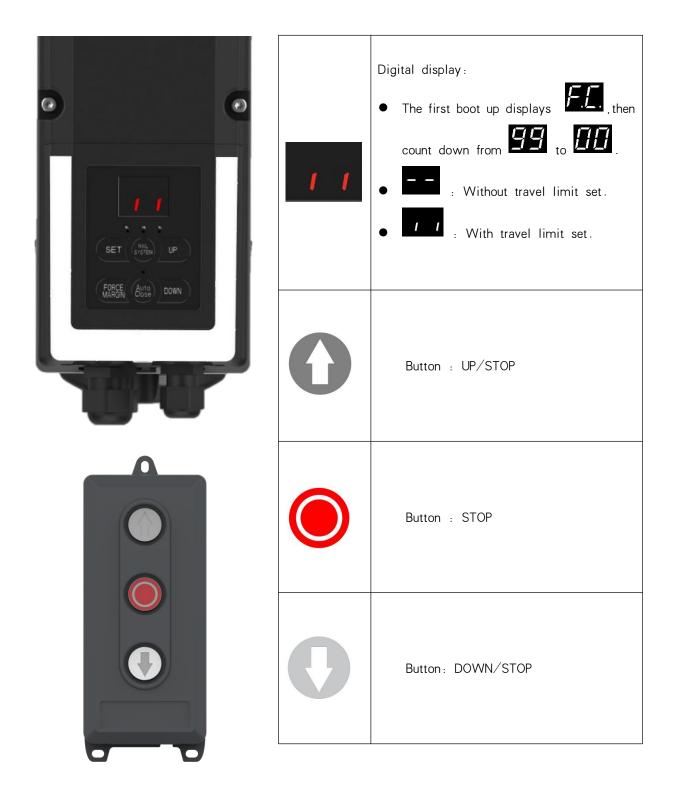

Spare parts

Only use original spare parts.

TECHNICAL DATA

Model	BASE 35	
Max. output torque (Nm)	35 Nm	
Rated output torque (Nm)	25 Nm	
Output speed (rpm)	24—32 rpm	
Output shaft/hollow shaft (mm)	φ25.4 mm	
Static holding torque (Nm)	400 Nm	
Door area (m²)	≤18 m ²	
Input voltage (V)	110-127V/220-240V	
Motor power (W)	350 W	
Control system	24V DC	
Thermal protection temperature (°C)	105 ° C	
Max. cycles per hour (Cycle)	20 cycles	
Class of protection	IP 54	
Limit switch range (maximum revolutions of output shaft / hollow shaft)	15 turns	
Temperature range (°C)	$-20^{\circ} C \sim +40^{\circ} C$	

OVERVIEW OF CONTROL

BASIC BUTTON INSTRUCTION

Item	Button	Description
1.	SET	Short press: Confirm setting; Long press: Enter the function menu setting
2.	UP	Short press: Adjust the function menu Long press: Restore factory setting
3.	DOWN	Short press : Adjust the function menu Long press : Running cycle counter inquiry
4.	RAIL SYSTEM	Short press : Return Long Press : Enter into rail system selection (Refer to the quick operation guide for details — Page 6)
5.	Auto Close	Short press: Quick activate "AUTO CLOSE" function
6.	FORCE MARGIN	Short press: Quick activate "FORCE MARGIN" function

COMMON FUNCTION QUICK SETTING INSTRUCTION

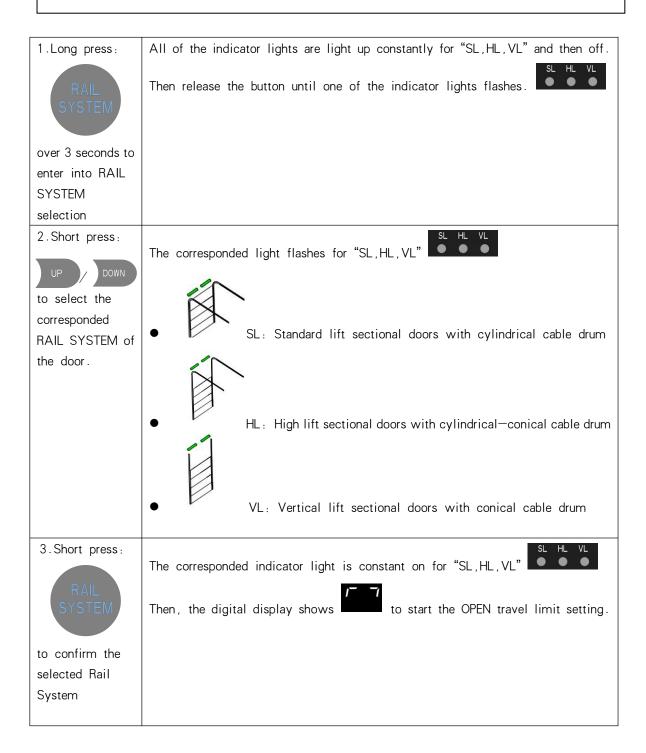

Function Item	Operation	Description
AUTO CLOSE	Short press:	 Important: The "AUTO CLOSE" only can be activated when the Photo beam or light curtain has been correctly installed and the photo beam function has been enabled from function menu (Refer to page 18 - Menu 5). Short press the "AUTO CLOSE" button, when the indicator light is turned on. It means the "AUTO CLOSE" function has been activated. (Default: The door only can auto close while in the open limit position. And the Auto Close time is 15 seconds). Note: Refer to page 16 - Menu 4 to change any setting for AUTO CLOSE conditions or time if necessary. Note: If there is no any photo beam or light curtain installed, the door can not be closed, and the LED display will show the letter "E6" as an indication. Short press the "AUTO CLOSE" button, when the indicator light is turned off. It means the "AUTO
Force Adjustment	Short press : FORCE MARGIN	 CLOSE" function has been dis-activated. Short press the button, the digital display will indicate the current force level firstly Continually short press the button: Incremental rolling display the force level between to to L1: Minimum force level ; L9: Maximum force level Note: L3 to L7 is recommended.
Running Cycle Counter Inquiry	Long press the button for 6 seconds:	 The digital will rolling display — — — — — — — — — — — — — — —
Restore Factory Setting	Long press the button for 10 seconds:	 The digital will rolling display EFFFFF then release the button, it means the drive has been restored to factory setting. Note: The running cycle counter record will not been cleared.

QUICK SETTING TO GUIDE THE DRIVE WORKS

BY "AAS" (Auto adaptive system)

Important:

- "AAS" will automatic identify the door condition to define a best program for its "Open/ Close speed", "Soft start/ soft stop ranges" and "Force sensitivity".
 - A quick setting guide the drive will work properly after below operation.

4. Long press:	Long press the button UP/DOWN to set the door to the target OPEN limit position,
	then release the buttons.
UP / DOWN	Short Press the SET button once to store the open limit position, the digital displays
	to start the CLOSE travel limit setting.
5. Long press:	Long press the button UP/DOWN to set the door to the target CLOSE limit position
	then release the buttons.
UP / DOWN	Short press the SET button once to store the CLOSE limit position, then the door
	drive will automatically open and close the door to store the door weight and
	spring balance conditions.
	Note:
	a. If a system selection error occurs during the setting process, please
	click , Execute enter to exit the setting, and then execute the first
	operation again.
	b. Active or change any stand alone function, refer to the below
	"FUNCTION TABLE MENU".

FUNCTION MENU DESCRIPTION

MENU 0 Travel Limit Setting		
SET RAIL SYSTEM UP FORCE AUTO CLOSE DOWN	 Press and hold SET button for about 6 seconds to enter travel limit setting until "0.—" appears on the display then release the button. 	
	 Press SET to enter travel limit setting menu, the digital displays , now you can set the OPEN Position Limit. Click the button UP/DOWN to adjust the open limit position of the door. Click the SET button to confirm the open limit position. 	
	 Digital now displays automatically , now you can set the CLOSE position limit. Click the button UP/DOWN, to adjust the close position limit. Click the SET button to confirm. Then the door drive would automatically open and close the door and save the setting. 	
E		

MENU 1	Common F	Function Setting
Wired Push Button Mode Setting	<i>[. –</i>	 Press and hold SET button for about 6 seconds to enter main menu until "0" appears on the display then release the button. Press UP till "1" appears on the display, press SET to enter common function setting menu.
SET RAIL SYSTEM UP FORCE AUTO CLOSE DOWN	<i>!!]</i>	 After press the SET button on "1", "1.0" appears on the display
		Press SET to enter the control panel button mode setting.
	. 1	Execution means:
[Press UP to (1)]		Long press () to open the door,
		long press 🖤 to close the door
	<u>, </u>	Execution means:
		Click to open the door,
[Press 'SET' to (1.0)]		Long press 🔱 to close the door
	E.	Execution means:
		Long press 🕜 to open the door,
		Click 🕐 to close the door
	.4	Execution means:
7		Click 🚺 to open the door,
		Click 🕛 to close the door (default)
	Remark :	When the emergency stop
		function works, Function
		is executed as default button

		mode.
SET RAIL UP SYSTEM UP FORCE AUTO DOWN	<i>ł. –</i> <i>ł. †</i>	 mode. Press and hold SET button for about 6 seconds to enter main menu until "0" appears on the display then release the button. Press UP till "1" appears on the display. Press SET and "1.0" appears on the display, Press UP till "1.1" appears on the display.
Reversal Distance Ignorance Setting (Fine adjustment of the pre-close limit position- for DW)	A	 Press SET to enter the Reversal Distance Ignorance Setting The digital flashes , Adjust the
[Press UP from (1.0)]		stalls from the to to the by button UP or DOWN, Press SET to confirm the function option, automatically exit to the menu to continue setting the next function menu, or press the RETURN button to exit the function setting.
	Remark :	According to the door rail system and the size of the cable drum, the adjustment range of each setting is between 20 mm -50 mm (Based on the different cable drum installed). Default is about 35mm. The calculation format is like this: [8] * 2* 2.2mm
Fine adjustment of the open limit position	<i>l.2</i>	 Press and hold SET button for about 6 seconds to enter main menu until "0.—" appears on the display then release the button. Press UP till "1.—" appears on the display. Press SET then "1.0" appears on the display. Press UP till "1.2" appears on the display.

		Press SET to enter, digital flashing
	- 5	<u></u>
-5 K		display ; Use the UP or DOWN
		buttons to adjust the number displayed on
		the digital tube between
		-F. Select the
		target parameter , press SET to confirm the
		function option, then exit to the menu
		Continue to set the next function
		menu, or press the cancel button to exit
	Remark :	the function setting.
		Default - D
		a. Select to F, which
		means the limit position moves
		further in the OPEN DOOR direction.
		b. Select - F to D , which
		means the limit position moves in the
		door center direction.
<pre>// // // // // // // // // // // // //</pre>	17	• Press and hold SET button for
Fine adjustment of the close	···	about 6 seconds to enter main
1		menu until "0.—" appears on the display then release the button.
I limit position		 Press UP till "1.—" appears on the
		display.
		 Press SET then "1.0" appears on
		the display.
		• Press UP till "1.3" appears on the
		display ,
[Press UP from (1.2)]	- 5	Press SET to enter, digital flashing
		display - 5 ; Use the UP/DOWN

		function option, then exit to the menu
		13

Remark :	Defa	ault - 2
	a.	Select D to F , which
		means the limit position moves in the
		CLOSE DOOR direction.
	a.	Select -F to D, which
		means the limit position moves in the
		door center direction.

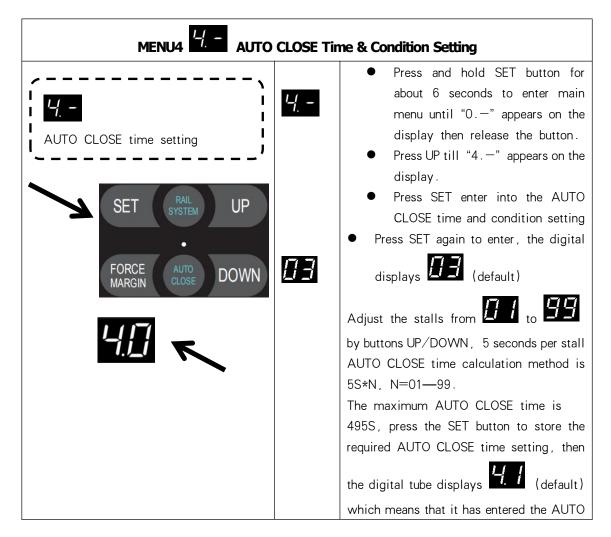

MENU2	Operating Pa	arameter Setting
Door closing speed adjustment	2.0	 Press and hold SET button for about 6 seconds to enter main menu until "0.—" appears on the display then release the button. Press UP till "2.—" appears on the display. Press "SET" into the operating parameter setting menu, digital displays "2.0" Press SET to enter the door closing speed adjustment menu,
	. 1	High speed, 100% of standard door closing speed, 50% of soft closing speed
	. <u> </u>	Medium speed, 90% standard door closing speed, 40% of soft closing speed
	E.	Low speed, 80% standard door closing speed, 40% of soft closing speed
	.4	Low speed, 70% standard door closing speed,35% of soft closing speed
[Press 'SET' to (2.0)]	.5	Low speed, 60% standard door closing speed, 35% of soft closing speed
20 K	.Б	Low speed, 50% standard door closing speed, 35% of soft closing speed
	Remark :	After quick setting the door drive, AAS function automatically select the most optimized speed for the door already. When you change the speed manually in this menu, you have to set the travel

		position limit again to ensure door drive
		works properly.
Door opening speed adjustment	2. 1	 Press and hold SET button for about 6 seconds to enter main menu until "0" appears on the display then release the button. Press UP till "2" appears on the display. Press "SET" into the operating parameter setting menu, digital displays "2.0" Press UP till "2.1" appears on the display Press SET to enter the door
		opening speed adjustment menu,
	. 1	High speed, 100% of standard door opening speed, 50% of soft closing speed
	2	High speed, 90% of standard door opening speed, 40% of soft closing speed
	7	Medium speed, 80% of standard door
	/	opening speed, 50% of soft closing speed
	.4	Low speed, 70% of standard door opening speed, 40% of soft closing speed
	Remark :	After quick setting the door drive, AAS function automatically select the most optimized speed for the door already. When you change the speed manually in this menu, you have to set the travel position limit again to ensure door drive works properly.
Soft closing distance adjustment	2.2	 Press and hold SET button for about 6 seconds to enter main menu until "0.—" appears on the display then release the button.
		 Press UP till "2.—" appears on the display.
		 Press "SET" into the operating parameter setting menu, digital displays "2.0" Press UP till "2.2" appears on the display
		 Press SET to enter the Soft closing distance adjustment,

	1	Soft closing distance
	. 1	SL:10CM, HL:20CM, VL: 25CM
	7	Soft closing distance
	./ <u>_</u> `	SL:20CM, HL:30CM, VL: 40CM
	7	Soft closing distance
	.=	SL:25CM, HL:45CM, VL: 50CM
	11	Soft closing distance
	.7	SL:40CM, HL:55CM, VL: 60CM
Re	emark :	The above soft closing distance is
		estimated with 18-inch cable drum. The
		actual distance will be different according
		to the customer's cable drum diameter.
		The rail system (AAS) will automatically
		match the optimized soft closing distance.
		After the customer changes the default
		distance, the previous travel limit will be
		lost and needs to be re-learned.

Remark :	The soft stop function is enabled by default
	3.1 , Whether it is an external device
	or a remote control, the soft stop function is implemented during operation.
	means: Soft stop function is off
	3.1 means soft-stop will low-down the speed to 30% in 0.75 second, then stop the
	door
	3.2 means soft-stop will low-down the
	speed to 40% in 0.75 second, then stop
	the door.
	3.3 means soft-stop will low-down the
	speed to 50% in 0.75 second, then stop
	the door.
	3.4 means soft-stop will low-down the
	speed to 60% in 0.75 second, then stop
	the door.

	CLOSE condition activing
	CLOSE condition setting,
	Adjust by buttons UP/DOWN from
	4, 1 or 4, 2 or 4, 3.
	Select the corresponding function, press
	the SET button to save and exit the menu
	setting.
Remark :	The AUTO CLOSE function is turned on,
	which means the door is controlled by the
	AUTO CLOSE button on the control box.
1 ()	17-1
' ' !	Condition defined means: Only after the
	door is opened to the open limit position,
	the AUTO CLOSE function is effective and
	starts timing.
42	Condition 🥵 means: After the door
	stops at any position when opening, the
	AUTO CLOSE function is effective and
	starts timing.
43	Condition 43 means : No matter where
	the door is open, as long as it is not at
	the close limit position, it will
	automatically close
Remark :	a. If the infrared function is
	turned on, the AUTO CLOSE timing
	will stop when the infrared is blocked
	by an obstacle. After the obstacle
	removed, it will continue the
	previous timing and automatically
	close the door.
	b. When the door is about to
	close, the courtesy light flashes for
	warning.
	c. When the door is about to
	close, the warning light flashes to
	warn.
	d. Note: The flashing time of
	the warning light follows the courtesy
	light.
	e. The AUTO CLOSE function
	can only be used when the safety
1	protection device is used correctly

Maintenance alarm description (Running cycles will minus 1 cycle, after the door drive reaching the close limit position each time) c. When the maintenance alarm count shows 0, when the door drive runs to the open and close limit positions each time, the courtesy light will flash quickly, the buzzer will sound continuously to remind the customer that the door and the drive unit need maintenance, and the digital tube will display fault
		d. After the maintenance of the door or drive unit is completed, the maintenance personnel need to re-enter the menu to set the maintenance alarm cycles, and the cycles of maintenance alarms will restart to count.

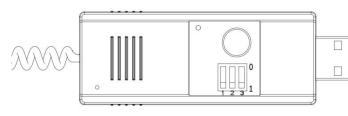

MENU9 Gear Moto	or Running Dir	rection Rotating Setting
<pre>////////////////////////////////////</pre>	Q _	• Press and hold SET button for
Door drive output rotating		about 6 seconds to enter main
		menu until "0" appears on the
direction setting		display then release the button.
		● Press UP till "9.—" appears on the
		display.
SET RAIL SYSTEM UP		• Press SET to enter the Door drive
		output rotating direction setting
FORCE AUTO MARGIN CLOSE DOWN	9.1	G Door drive rotating direction is
		forward. (Default)
	9.0	Door drive rotating direction is
		reverse
	Remark :	After adjusting the rotating direction of
		the door drive, it is necessary to
		relearn the travel limit.

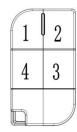

FAULT DISPLAY

Fault Display Code	Fault Description	Fault Correction
FA	Encoder failure, the	1. Replace the encoder
	encoder cannot write and read data	2. Replace the encoder cable
E I.	No motor motion signal is detected,	1. Check whether the wiring between the limiter and the control board is
EZ.	The positive and negative poles of the motor wire are reversed	 Ioose. Exchange the positive and negative poles of the motor
E B.	Motor current is too high	 Choose matching control system and motor Check the door body Replace the high—power door drive
<u>E 4</u>	Door drive overload alarm, current overrun	 The door is stuck or the door is too heavy The door size is too large Check the door body Replace the high—power door drive
<u>E 5.</u>	Optical safety edge sensor kit fault	 8.2K resistor is open circuit, missing installation The conductive tape edge is aging or broken
<i>E </i>	Infrared/infrared light curtain function port is triggered	1. Check whether the infrared function is turned on 2. Turn on the infrared function to detect whether the infrared device is blocked 3. Check whether the NO/NC wiring of the infrared device output port is wrong. The NO port is connected by default, and the port is closed after the shot
E 7.	SD (Pass door/wicket door) switch is triggered	1. Check whether the SD function port of the secure

		port is not connected
<u>E 8.</u>	The maintenance alarm cycle reaches	1. Notify maintenance personnel to maintain the door and drive
<u>E 9.</u>	Safety port three-wire infrared fault	 The three—wire infrared electric photo eye is blocked Three—wire infrared electric photo eye failure Is the three—wire infrared electric photo eye a
EL.	Communication failure between door drive and control panel.	product of our company?1. Re—plug the 8Pribbon cable2. The door driveneeds to be powered off andrestarted3. Replace the 8Pribbon cable
<u>EE.</u>	Short learning travel limit	1. Re-learn the travel limit 2. Encoder position data failure
Ed.	Air pressure switch (DW) self-test failure	 Check the NC air switch (DW) device performance. Check the air leak possibility from installation.
EE.	During the self-learning of the travel limit, if the rotor is blocked or the encoder is faulty, the buzzer will sound once and display "EE."	 Re-learn the limit position. Check the encoder connection Replace the encoder
<u>EF.</u>	The emergency stop switch function is triggered.	 Check whether the emergency stop switch is pressed Whether the emergency stop switch uses a normally closed (NC) switch Whether the external port STOP short-circuit connection is loose

TX/RX FUNCTION MODULE DESCRIPTION (optional)

1. The external decoding module uses the standard HCS301 format open code, the frequency 433MHZ/868MHZ is optional,

- 2. Transmitter 4 button design; Transmitter key value 1, 8, 2, 4
- 3. The transmitter module and control box use USB standard interface to connect

4. Short press the LEARN button on the module, the LED will light up, press the remote control to learn the code. Long press the learn button on the module for 6 seconds, LED will flash 5secondsquickly to clear the code

5. The default maximum number of transmitter storage is 50codes, and if 50 codes is already learned, the 51stcodewill automatically cover the 1stcode.

6. Transmitter module function:

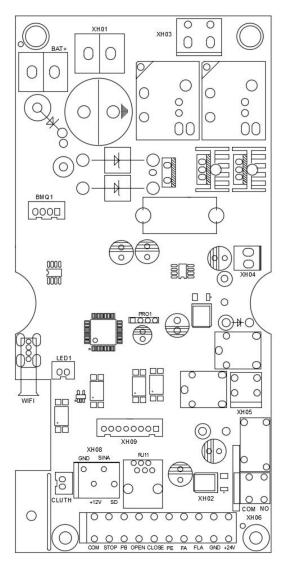

- a. Standard function: Single key cycle
- b. Ignore the key value function, all keys are valid: OPEN-STOP-CLOSE command order each cycle. As long as learning a key, the others are valid
- c. Multiple function key 1:
 - 1st button execute OPEN-STOP-CLOSE command order each cycle ;
 - 2nd button execute PARTIAL OPEN command order;
 - 3rd button execute courtesy light ON/OFF command order;
 - 4th button execute remote LOCK command order;
- d. Multiple function key 2:
 - 1st button execute OPEN the door command order;
 - 2nd button execute STOP command order;
 - 3rd button execute CLOSE the door command order;
 - 4th button execute remote LOCK command order;
- e. Multiple function key 3:
 - 1st button execute OPEN the door command order;
 - 2nd button execute STOP command order;
 - 3rd button execute CLOSE the door command order;
 - 4th button execute "CF" command order; ("CF" command order means press the 4th button, the door will OPEN directly without STOP action, execute the REVERSE action during door closing)
- 7. Adjust the transmitter function through the three-circuit DIP switch

Important Note:

When using multiple function keys, you must use our company's standard transmitter. The transmitter provided by the customer has inconsistent key values, which may cause function failure.

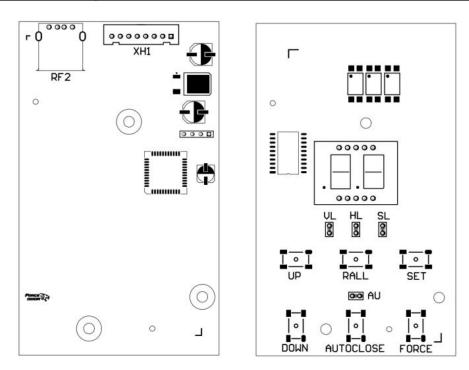

S1	S2	S 3	Function Description
1	1	1	Standard function (Factory default)
0	1	1	Ignore the key value function
1	0	1	Multiple function key 1
1	1	0	Multiple function key 2
0	0	1	Multiple function key 3

FUNCTION WIRING DIAGRAM

DW (Air pressure switch)	Activate function menu	
	Remark : Only NC (Normal close) contact air pressure switch	
Note1: SP15 is disconnected, the door drive stops, and all control functions are invalid.		
Note2: The Electrical safety edge is short-circuited during the closing process, and the door		
drive will automatic reverse.		

XH08 Safety terminal

DW (Air pressure switch) self-test instruction

• Correctly installed the Air Pressure Switch and then enter the menu EB/III to enable the DW function.

(DW self-test successfully)

Short press the "DOWN" button to close the door. The air pressure switch self-test is performed automatically when the door is closed to the closing limit position. If the air pressure switch (DW) is triggered during the door closing process, the door will be automatic reverse, which means the DW self-test is successfully.

(DW self-test failed)

Short press the "DOWN" button to close the door. The air pressure switch self-test is performed automatically when the door is closed to the closing limit position. If the air pressure switch

(DW) is NOT triggered during the door closing process, and the display shows faulty **ED**, which means the DW self-test is failed. Then the dead man mode will be enabled automatically

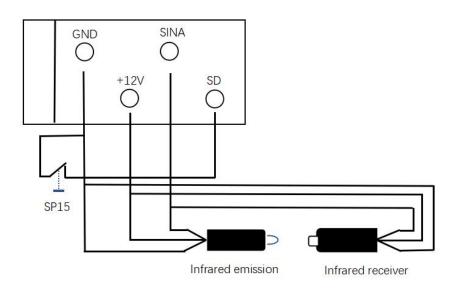

during the next door closing operation. Check the air switch device (Refer to faulty description page) to fix the issues and repeat the above self-test operation until it's succeed.

Remark : Fine adjust the pre-close limit position for DW, refer to the menu

XH08 Safety terminal

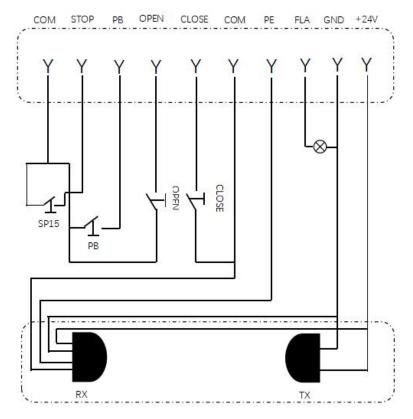

(Optical safety edge/ three-wire infrared photo eyes/wicket door protection)
